Introduction

The file is an aftermath of the readme file. it describes the files contained in this repository.

Book1.xlsx

Book one contains the input data to algorithm in the file *Zimbabwe_format.R*. In essence, its the data to be wrangled.

Codebook.pdf

This is the file you are reading now.

Codebook.Rmd

This creates the file *Codebook.pdf*.

README.md

README describes what the entire projects is about, for whom and for what purpose

Wrangled Data.csv

This is the output after ingesting *Book1.xlsx* (input data) into *Zimbabwe_format.R* (algorithm). Basically, it is the results of the project.

Zim_format.R

Zim_format.R is a somehow crude and very unprofessional ersion of *Zimbabwe_format.R*. This doesn't translate the latter is heavily efficient and faster but just fairly efficient.

Zimbabwe_Met_For_Rainwatch.Rproj

This is the project itself as created in R. It is the project file.

Zimbabwe_format.R

This is my version of what is appropriate of the two files: *Zim_format.R* and *Zimbabwe_format.R*. Although crude, its a little better than *Zim_format.R*
